Stafford, Texas USA

• 55,000 square feet • ISO 9001:2008 • API 6D • CE/PED • ISO/TS 29001 • API Q1

Home to the JAG Valve trunnion, JAGflo's Stafford facility is operated under industry-leading quality guidelines to ensure lasting reliability. With extensive stock and a full service facility, JAGflo can deliver complete valve packages including valve automation, stem extensions, pipe pups, coatings and more. By manufacturing, testing and modifying valves in-house, JAGflo can provide reduced delivery and cost while maintaining high quality standards.

JAGflo's wholly owned Dalian, China facility uses state of the art machining and design capabilities to produce world-class valves that have earned a reputation of reliability and value. As an ISO 9001 certified facility, JAGflo's Dalian plant produces reliable and safe valves with a hands-on approach to quality. Our foundries and forge suppliers are carefully screened and routinely audited. JAGflo's commitment to quality can be seen in every step of the design, manufacturing and testing process. Our passion for "Building with Integrity" is passed to the customer through a reliable and value-driven valve.

Since 2005, JAG flocomponents USA, Inc. (JAGflo) has delivered quality valves at exceptional value. JAGflo manufactures JAG trunnion mounted and floating ball valves and specialty valves for the Oil and Gas and related industries. Forged from industry veterans, JAGflo fills the need to supply flow control products with uncompromising quality at globally competitive values. Our commitment to quality drives everything we do to ensure our customers receive a reliable product on time and on budget.

The perfect combination of domestic manufacturing and global materials, JAG valves offer end-users an economical choice with proven reliability and on time delivery. JAGflo is API 6D, CE/PED and ISO 9001 certified with manufacturing facilities in Stafford, Texas and Dalian, China operating under strict quality guidelines. Every valve is carefully machined, assembled and tested before leaving our facility to ensure your project runs smoothly, on time and on budget. With hundreds of thousands of valves installed worldwide, JAGflo has earned a reputation that you can depend on.

Built with Integrity

JAG Valve trunnion mounted ball valves are developed from years of engineering experience backed by a worldwide quality program. Every step of JAGflo's process, from material sourcing to final assembly and testing, is carefully planned and implemented in order to ensure lasting reliability.

DESIGN

JAG trunnion mounted ball valves are designed and manufactured in accordance with the latest industry standards.

- 3-piece body design provides easy access for on-site maintenance.
- Special face to face dimensions can be supplied.
- Available in full or reduced bore with raised face, ring type joint, weld end or hub connections.
- Pressure ratings range from ASME 150 through ASME 2500.

MATERIAL SELECTION

Valves are manufactured in a range of forged materials including A105, LF2, Stainless Steel, Duplex, Monel, Inconel and other special alloys. JAGflo uses forged materials, which ensures a high integrity material grain structure and improved sealing between the components. Sealing is by O-rings and graphite rings. The graphite ring continues to provide a seal in the event of a fire. O-rings can be supplied suitable for AED applications in a variety of materials.

SEAT

Independent seats with preloaded Inconel X750 springs are always in contact with the ball giving a perfect seal, even at low pressure. The replaceable seat rings and soft inserts can be supplied in materials to suit most service conditions. Most sizes and classes have a sealant injection system fitted as standard. This allows emergency sealing to be carried out in the event of damage to the soft seat. Seats are available in single or double piston effect configurations.

STEM

Stems are manufactured separately from the ball and feature an anti-blowout design. Stems are supported by RPTFE-lined bushings which reduce valve torque. Stem sealing is by O-rings and graphite rings. From 2" and above, stems are supplied with a sealant injection system.

ANTI STATIC DEVICE

Electrical conductivity is achieved by fitting a positive contact device between the stem, ball and bonnet.

DOUBLE BLOCK AND BLEED

JAG trunnion mounted valves are equipped with a vent and drain plug, which allow the cavity to be relieved when pressure is applied to both sides of the ball simultaneously. JAG valves are equipped with sealant injection fittings and vent and drain plug fittings in 316 SS as a standard.

TESTS

Valves are tested in accordance with API 6D, API 598, ASME B16.34 and other applicable standards.

FIRE TEST CERTIFICATION

Valves are designed and certified by an Independent Authority according to API 607.

ACCESSORIES

JAGflo provides locking devices, pipe pups, stem extensions coating and valve automation per customer requirements. Suitable materials, components, seats and O-rings can be supplied for explosive decompression, cryogenic or marine applications.

EXTERNAL COATING

Carbon steel valves are normally supplied with JAG standard paint finish. Valves can also be unpainted or finished to customers' paint specification.

JAGflo offers a wide variety of materials and options to meet your project requirements

JAGflo's commitment to quality begins with world class engineering and is the driving force behind every step of the process. We inspect and certify mills and foundries that supply our raw materials to ensure top quality products. Every component is machined using state of the art equipment in factories that adhere to our strict quality guidelines. Every single valve we build is tested to today's rigorous standards so every valve we ship is guaranteed to deliver lasting reliability, operational safety and uncompromised long-term value. JAGflo's culture is a hands-on approach to quality and a dedication to putting the customers' needs first in manufacturing, sales and service. *Our company and products are....*
